zenhire Recruiters to Service Staffing Needs of CollaborateMD Users

Partnership Enables zenhire Recruiters to Service the Healthcare Industry's Severe Staffing Shortages, and Further Enriches CollaborateMD's Solution Set

Amherst, NY and Orlando, FL – July 31, 2007 – **zenhire** (www.zenhire.com), provider of zensuite, the most powerful pre-employment tools, services, and collaborative network available to human capital professionals, and **CollaborateMD** (www.collaboratemd.com), a leading provider of Internet-based practice management and medical billing software for the healthcare industry, today announced they have partnered to enable zenhire member recruiters to service the temporary and full-time staffing requirements of CollaborateMD customers.

For CollaborateMD, the zenhire partnership increases the value of its office solution set to healthcare providers. And for zenhire, the partnership affords its human capital professional members access to the more than 2,300 healthcare providers currently using CollaborateMD medical billing and practice management software, and the opportunity to service industry-wide staffing shortages.

Commenting on the value of the partnership to CollaborateMD and its customers, CollaborateMD CEO Douglas Kegler said, "Any time, whether organically or through a business partnership, we can extend real value to our customers and use the Internet to increase collaboration, we will do it. There is no question this partnership achieves on both fronts."

"This partnership works for zenhire not just because it gives the human capital professionals on our myzenet network access to the high-growth, high-demand healthcare industry through a high-quality, established channel, but also because it fulfills a commitment we make to every customer – to provide access to tools, services and benefits they can only get from zenhire," said zenhire CEO Robert Fritzingier.

While the partnership just took effect, the concept was very well received by zenhire's and CollaborateMD's customers, and has lead the partners to begin developing other joint programs.

About CollaborateMD

Headquartered in Orlando, FL, CollaborateMD provides the health care industry with an Internet-based Medical Billing and Practice Management Software program that has the speed of a local PC application and the "use anywhere" flexibility of a Web browser application. CollaborateMD is a 100% Java application utilizing Sun Microsystems (NASDAQ: SUNW) Java Platform. CollaborateMD offers physician offices and medical billing services the opportunity to become more efficient and flexible.
